Which weights each rule keeps

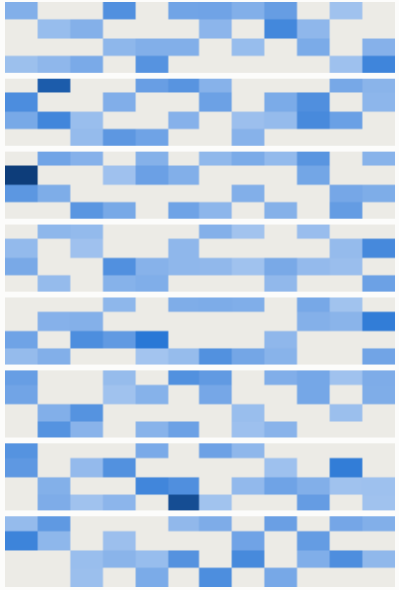
One synthetic Laplace block: 32 weights (rows, the pruning direction) × 12 output columns · white lines = group boundaries

kept (darker = larger magnitude) pruned to zero

Paired 4:8 (NVIDIA)

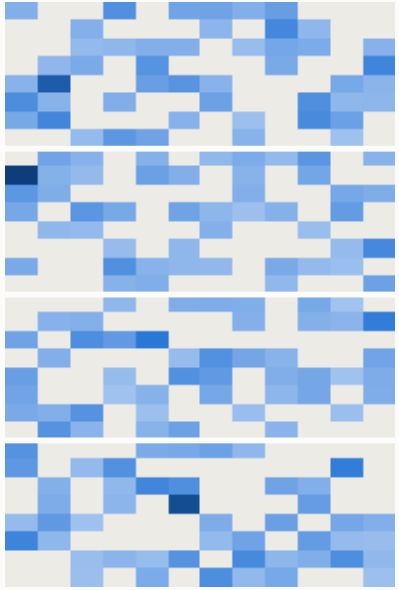
keeps 87% of the energy

2:4



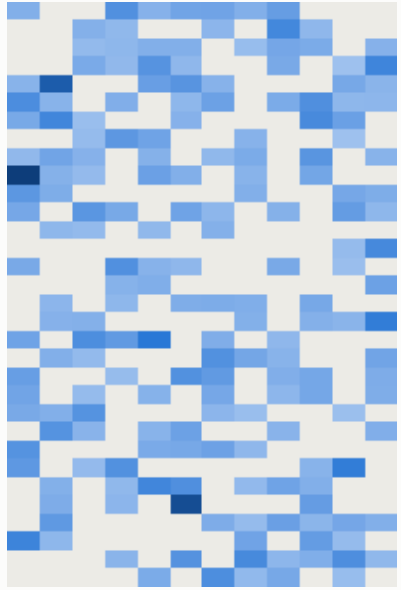
keeps 91% of the energy

4:8 (ours)



keeps 94% of the energy

No pattern (best possible)



keeps 96% of the energy
